

male orange tip Butterfly

slow worms poem

21.4.20

Silently and quietly they slither through
the leaves

sliding to their hidden places really
super sense!

Brown, grey, silvery and shiny //

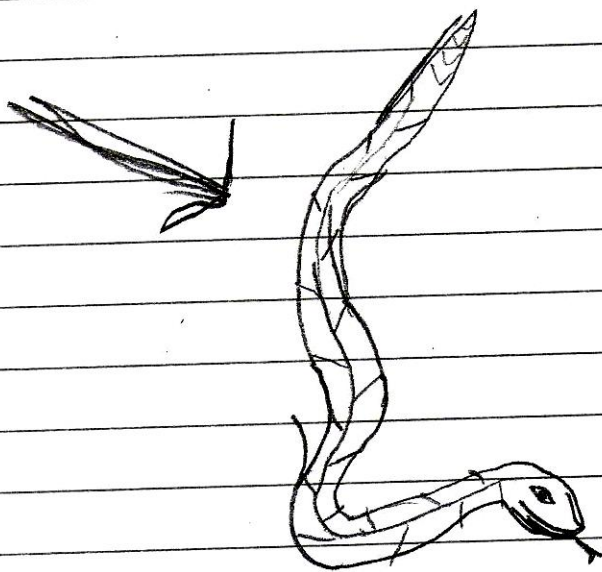

interesting colors they have.

sticking out their tongues, smelling for
danger.

It's exciting to see them!

slow worms love my garden.

slow
worm

Hedgehog

1. Hedgehogs are strong swimmers and good climbers.
2. Adults Hedgehogs have 5,000 spines.
3. They eat slugs, snails, worms and insects.
4. Between November and March, hedgehogs hibernate in nests of grass and leaves.
5. During the ^{mating} process, the male will circle the female attracted by her smell.
